

Paperless inventory / cataloguing
with mobile data collection devices

isMobilinvent

The quick and easy inventory solution

Features of isMobilinvent

- Cataloguing without paper lists.
- Works as a stand-alone system or can be connected directly with your ERP system.
- Record items and inventory by simply scanning the item's barcode or serial number.
- Minimise errors.
- The data recorded in the stand-alone software is exported as a csv file.
- Multiple data collection devices can be used simultaneously.

Simplify your inventory processes

Annual inventories are often time-consuming and require a lot of staff. **isMobilinvent** provides you with a simple solution to collect and analyse data using a paperless barcode terminal. The mobile terminal replaces the inventory lists and simplifies the counting of items. This minimises work, reduces potential sources of error and increases your efficiency. **isMobilinvent** is a stand-alone system and works completely independently of your existing ERP system. In order to accelerate the inventory procedure, several mobile terminals can be used. **isMobilinvent** is suitable for smaller and larger companies and aids in the recording of products with details on quantity. It also transfers these values in suitable export files or directly to your merchandise management system (optional).

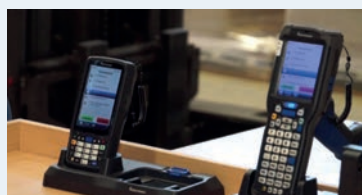

Cataloguing with isMobilinvent

Being able to create new datasets directly on a mobile terminal and print labels directly using a mobile barcode label printer make it possible to assess and mark items and objects on-site. Each user can use their name to register on the mobile terminal's start screen. The cataloguing procedures are issued in order, along with the name, date and time. If an item is scanned, the exact item data will be displayed on the terminal. Items that are not available can be supplemented and any changes to the item description can be edited using the keyboard. By confirming the quantity, the cataloguing procedure for the item is complete and the next item can be recorded. If an item is accidentally re-scanned, a message will appear on the display on the barcode terminal and the item can either be recounted or you can skip to the next item. After completing the cataloguing process, the inventory data can be transferred directly to your desktop PC at the touch of a button, where it will appear in csv-format for further digital processing. Alternatively, **isMobilinvent** can communicate directly with your merchandise management system.

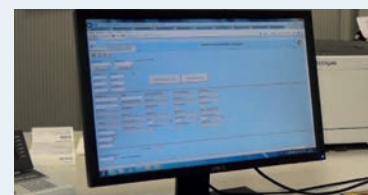

Open the core data on your PC.

Export the core data from the ERP system and store it on the mobile computer.

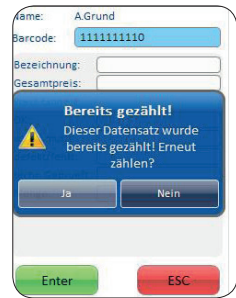

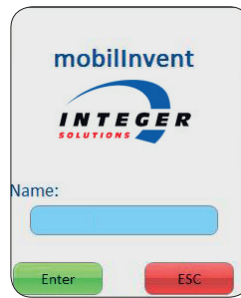

Record all inventory items using the barcode scanner.

Automatically compare all data collected with your core data.

Paperless cataloguing to meet your requirements

With the stand-alone software **isMobilinvent**, you can list your inventory parallel to daily operations. The software comes pre-installed on the barcode terminal. Inventory data is entered into the mobile terminal via your desktop PC. If necessary, you can adjust the target fields precisely to match your requirements. In addition to both target fields, serial number, room or storage space number, there are an additional 8 freely determinable fields available (e.g. measurements, manufacturer, user etc.). After transferring the inventory lists, the inventory items can be recorded using the barcode scanner on the mobile data collection device.

Standard features at a glance

- Aids in the recording of products with details on quantity. It also transfers these values in suitable export files or directly to your merchandise management system (optional).
- Quick and paperless recording of items and inventory by simply scanning the item's barcode.
- Alternative: Detailed manual entry of details using the alphanumeric keyboard.
- The user and date of collection is stored automatically.
- Removes the need to manually compare paper lists and reduces potential sources of error.
- After collecting data, it allows you to simply restore the data gathered on a desktop PC at the touch of a button - the data will be ready for further processing immediately (csv file).
- Optionally, you can print out the list directly from the mobile terminal via existing network printers.

The advantages of paperless cataloguing

- A visible acceleration of the cataloguing process.
- Completely paperless cataloguing.
- Avoid long search times and the manual comparison of search lists.
- Reduce errors.
- The user interface can be adjusted to meet your requirements.
- It is possible to catalogue parallel to daily operations.

With mobile or stationary barcode printers and their corresponding materials, items and inventory can be issued with high-quality labels.

We sell products from manufacturers including Zebra, Datalogic and many more.

Our services at a glance:

Local or in field mobile data collection

Warehouse management solutions

Marking and barcode solutions

Wireless network technologies for companies

Individually adapted software solutions

RFID technologies

Dedicated Auto-ID service workshop and on-site service

Integer Solutions GmbH is a provider of IT products and solutions related to **marking, identification and tracking**. Our solutions accelerate existing company processes and bring more transparency to existing operations. From advising on programming and integration to training and services, we assist you in process optimisation.

As an IT system vendor for logistics solutions, Integer Solutions provides all technical components, from barcode scanners and mobile data collection terminals to interfaces that match the target system precisely to meet the customer's needs, as well as the right software.

Our solutions and products optimise, for example, processes in warehouse administration, production, callout transactions or events. This is based on mobile and stationary data collection solutions, such as barcode and marking solutions, which are integrated seamlessly into existing company processes with our software modules. We work together with the most renowned manufacturers on the market, such as Zebra, Honeywell, Datalogic etc. and we will gladly assist you in choosing the right device to match your needs.
